

McAfee Cloud-Based Security for SMBs

Easy to manage security that fits your business, budget, and growth

Key Advantages

Security in a single SaaS solution

- Single, integrated solutions for desktop, file server, email security and encryption, and web security that are easy to install and easy to maintain

Easy and affordable

- Get virus, spyware, spam, web security, phishing, and desktop firewall protection; web-based management and reporting; automatic updates and upgrades; and around-the-clock technical support for an annual low-cost subscription fee
- Reduce the need for security management software, hardware, support, or dedicated IT staff. McAfee manages the security SaaS infrastructure off-site and provides automated maintenance and reporting.

McAfee SecurityCenter simplifies management

- With this simple-to-use, web-based console, you manage and generate reports on your security services
- Quickly customize reporting dashboards for better visibility
- Create multiple user groups, centralize all installations, configurations, reports, and schedule updates

Cybercriminals are targeting growing businesses like yours. They're zeroing in, believing that your business is an easier target because you can't afford a sophisticated security framework. Maintaining an up-to-date defense perimeter around your systems is increasingly difficult in the face of rapidly changing attack strategies and the realities of limited budgets. Still, there's an answer to this dilemma—cloud-based solutions that deliver the most effective, up-to-date security solutions that are both scalable and affordable. With Software-as-a-Service (SaaS) suites covering email, web, desktops, and mobile devices, McAfee can help protect your business against the growing list of known and unknown threats.

Comprehensive protection for your local business means an integrated security solution that is always on guard and always up to date—not just in the office, but also wherever employees work remotely. McAfee security solutions for SMBs provide protection against endpoint, email, and web threats—all managed online through the McAfee SecurityCenter.

Lower Total Cost of Ownership

Reduce your software licensing costs and hardware investment by subscribing to McAfee SaaS security solutions to automate security updates and free your IT staff. McAfee Gold Technical Support provides 24/7 phone and online coverage and is included in the subscription for easy access to trusted security experts. All customers have instant access to the online McAfee SecurityCenter for centralized management and reporting.

Comprehensive Coverage in a Single Solution

McAfee SaaS security solutions are designed for all types and sizes of businesses helping you put an end to point products with single, integrated suites.

Always On-Guard Security

One of the most beneficial aspects of SaaS is that no matter what security technology you are using, the protection profile is never obsolete with daily, automated updates and continual service upgrades. Rely on McAfee subject matter experts to manage, maintain, and upgrade your solutions behind the scenes and ensure that your protection profile is kept

up to date without interruption. Fast, transparent updates proactively defend your desktops, servers, and email against ever-evolving attacks.

Relentless Security

Integrated into McAfee SaaS security solutions, McAfee Global Threat Intelligence™ reputation technology is always-on protection that uses behavioral-based scanning to reduce exposure from unknown threats. It quarantines and blocks threats in real time and closes protection gaps. This technology keeps users continuously protected from advanced threats even before the signature is developed.

Quick Deployment to All Users

Regardless of where your users are, centralized deployment and configuration settings make for simple management over the Internet so your users are protected more quickly and stay up to date. Push or silent installation options are also available for desktop protection technology.

Simplified Security Management

Centralized installation, Microsoft Active Directory synchronization, configuration, reporting, updates, and group management can all be accomplished from the web-based McAfee SecurityCenter console. Via a web browser, you can access the secured McAfee SecurityCenter to customize reporting widgets, schedule reports and upgrades to local assets, or even run virus and spyware scans on the endpoints—in addition to administrating all SaaS email and web technologies.

SAVE PAPER. SAVE TREES.
SAVE THE PLANET.

McAfee Solution Services Partners
McAfee partners offer professional services that range from installation to management. Contact McAfee today to learn how McAfee Partner Security Services can help you—from implementation to ongoing remote monitoring and enhanced support services.

Integrated Web Security

McAfee SiteAdvisor® technology warns your employees before they visit a potentially dangerous website and helps them avoid online threats in real time. By testing websites and delivering safety ratings to users while they browse, it helps users stay safe online. You can extend your protection by enabling McAfee SaaS Web Protection. Instead of relying on your users to not click on a hazardous website, these sites can be filtered with our industry-leading gateway anti-malware engine and blocked entirely, if appropriate. Users are presented with information explaining why they are not allowed to browse to a particular website.

Email Security Beyond Spam

When you think about email security, blocking inbound threats before they affect your network, employees, or business operations comes to mind. Did you know this is just half the battle? Email is today's engine of productivity, so you need to ensure continued access to email to keep your business running. In highly regulated industries, inspecting outbound emails to protect intellectual assets, comply with regulatory requirements, and block inappropriate content may require expertise beyond your core competency. A snap to deploy, McAfee email security blocks inbound and internal threats, keeps your business running, and helps you meet compliance with built-in regulatory compliance templates and encryption capabilities that are easy to use, even from mobile devices.
