

McAfee Endpoint Protection Suite

Secure Microsoft Windows, Mac, and Linux systems with essential endpoint and data protection

Key Points

- Essential protection that consolidates endpoint and data security
- Reduces the time and effort spent deploying and managing security
- One-stop shopping for the right protections for traditional and fixed desktops

What do call centers, engineering design studios, and doctors' offices have in common? Their users rely on tower-based PCs and traditional desktop systems that never leave the office. Since these systems don't visit wireless hot spots, help kids browse the Internet at night, or get left at airports, they have a lower risk of being hacked, picking up malicious downloads, or being stolen while carrying sensitive data.

However, corporate users rely heavily on web-enabled applications and email, so even these fixed machines require sophisticated protection against the targeted, real-time malware these applications convey. Your email server should have an extra dose of anti-malware, backed up by malware protection on each endpoint itself.

In addition, most modern PCs have multiple USB ports and DVD drives. In the case of call centers, engineering design studios, and doctors' offices, an unhappy worker might take home customer databases, engineering designs and other intellectual property, or patient records and financial data. Device controls can help you restrict use of removable media and portable storage to avoid these data losses.

The McAfee Endpoint Protection Suite seamlessly integrates proven security to help you manage all of these risks, delivering both operational efficiencies and cost savings with the convenience of a single solution.

Always on, real-time malware protection

With the unprecedented growth of advanced persistent threats, enterprises cannot depend on solutions that use only signature analysis for

endpoint protection. There is a gap of 24 to 72 hours from the time a threat is identified to the moment its signature is applied to endpoints. In the meantime, your data and systems are exposed.

McAfee Global Threat Intelligence™ file reputation closes this gap, providing real-time, always-on protection based on the multi-vector threat insight gathered by McAfee Labs. It quarantines or blocks viruses, Trojans, worms, adware, spyware, and other potentially unwanted programs that steal confidential data and sabotage user productivity.

Advanced email virus and spam protection

Our solution scans your inbound and outbound emails to intercept spam, inappropriate content, and harmful viruses. We can quarantine suspicious emails to prevent evolving email threats from affecting your network and users. And a layer of antivirus protection for your email server prevents malware from reaching user inboxes.

Comprehensive device control

We make it possible to prevent critical data from leaving your company through removable media, such as USB drives, iPods, Bluetooth devices, recordable CDs, and DVDs. Tools help you monitor and control data transfers from all desktops, even if a device is physically disconnected from the corporate network.

Stateful desktop firewall

Control desktop applications that can access the network to stop network-borne attacks and downtime. You can deploy and manage firewall policies based on location to deliver complete protection and compliance with regulatory rules.

SAVE PAPER. SAVE TREES.
SAVE THE Planet.

McAfee sets the industry standard

- Recognized by Gartner as a leader in Endpoint Security and Mobile Data Protection
- First to manage a broad range of security products, including endpoint, network, data, web, and email security with one console
- First to deliver a single agent and single console for managing endpoint security
- First product to have a unified management platform for endpoint security and compliance management
- First to manage both McAfee and third-party security products
- First to combine endpoint security and data protection in one truly integrated suite

Proactive web security

Many web threats are silent and invisible to web surfers. Help ensure compliance and reduce risk from web surfing by warning users about malicious websites before they visit. You can also authorize and block website access based on users and groups, controlling user access to sensitive or inappropriate sites, such as gaming or adult content.

Management that lowers operational costs

All of the capabilities of the McAfee® Endpoint Protection Suite are managed by McAfee ePolicy Orchestrator® (McAfee ePO™) software, a centralized platform that manages security, enforces protection, and lowers the cost of security operations. Web-based for easy access, it provides intelligent security for quick and effective decisions and greater control.

McAfee ePO software can reduce the cost of managing IT security and compliance by more than 60 percent (Source: MSI International survey of 488 mid-sized and large enterprises).

This open management framework takes advantage of a single agent and single console design. Compared to old-style point solutions, our streamlined approach dramatically simplifies installation and maintenance of defenses and their associated rules and policies. It eliminates the system impact of multiple agents and the decision inefficiencies of multiple consoles. When policies need to be revised, updates happen quickly, accurately, and consistently.

You can correlate threats, attacks, and events from endpoint, network, and data security as well as compliance audits to improve the relevance and efficiency of security efforts and compliance reports. No other vendor can claim a single integrated management platform across all these security domains.

When Minutes Count, Real Time for McAfee ePO Software Delivers

Real Time for McAfee ePO software uses a scalable peer-to-peer methodology for querying information from all your endpoints in mere moments, with no extra hardware. This allows administrators to assess the security state and health of McAfee defenses whenever they need to. Then, through its unified dashboard and predefined actions, the workflow from diagnosis to mitigated risk takes minutes, not days. This groundbreaking technology dramatically reduces the exposure, risk, and cost of security events, outages, potential breaches, and damaged reputations. Enhance situational awareness and incident response for front-line endpoint administrators using an approach that scales to the largest organizations.

Feature	Why You Need It
Single integrated management	McAfee ePO software provides instant visibility into security status and events and direct access to management for unified control of all your security and compliance tools
Real Time for McAfee ePO	Instant visibility into the security state and health of McAfee products. Real-time actions help ensure that defenses are installed, running, correctly configured, and up to date
Multiplatform	Protects the full range of endpoints required by mobile and knowledge workers, including Mac, Linux, and Microsoft Windows
Device control	Lets you monitor and restrict data copied to removable storage devices and media to keep it from leaving company control
Desktop firewall	Ensures that network-based attacks are prevented and only legitimate network traffic is allowed
Anti-malware	Blocks viruses, Trojans, worms, adware, spyware, and other potentially unwanted programs that steal confidential data and sabotage user productivity
Antispam	Helps eliminate spam, which can lead unsuspecting users to sites that distribute malware and phish
Email server security	Protects your email server and intercepts malware before it reaches the user inbox
Safe surf and search	Helps ensure compliance and reduce risk from web surfing by warning users about malicious websites before they visit and letting administrators authorize and block website access
